Questions

1. What is the CO₂ distribution over time? In which period of the year are produced the biggest CO₂ emissions by Westeros missions?
2. Where(countries, continents) do most of the users travel? (Distribution of trips to certain places).
3. How much CO₂ emissions are produced to go to certain places?(Distribution of CO₂ over the countries).
4. Is the mission mode correlated with the distance/country?
5. What are the CO₂ emissions for a certain rank/title/house?
6. Which rank/title/house spent the most time in missions?
7. Which rank/title/house traveled the longest distance?
8. Which rank/title/house completed most of the missions?

I will also consider some of the questions proposed on the project website for the next step.
